

XeneX SOCaaS

With over 12 years of experience and focus on Security Operations Center as a Service (SOCaaS), XeneX delivers a unique cybersecurity solution and unparalleled 7/24/365 SOC experience.

XeneX's software development team continues to extend the capabilities of XeneX platform. A leading industry platform, XeneX integrates several cybersecurity tools to achieve a single pane of glass of cybersecurity for the enterprise.

XeneX security analysts receive extensive training on the XeneX platform and must complete certification before joining the SOC team.

XeneX Security Configuration Assessment

Save Time and Money with XeneX automated Security Configuration Assessment (SCA).

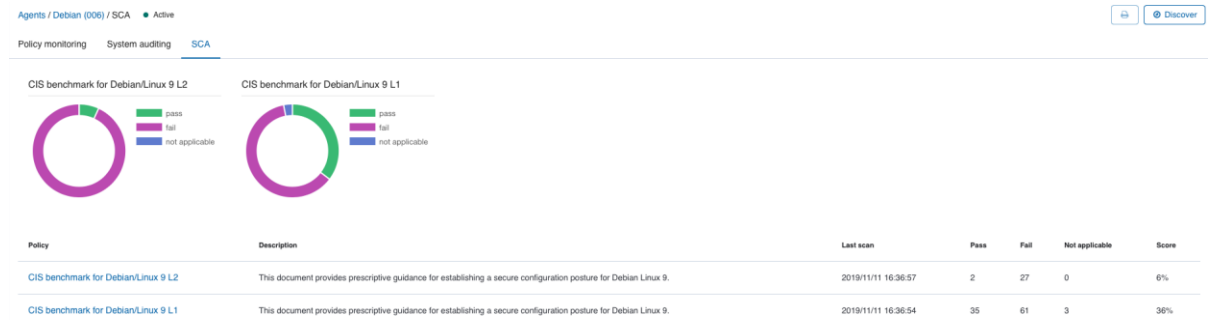

XeneX SCA is an integrated component of XeneX platform. It provides out-of-the-box checks that are used for systems hardening. XeneX SCA works on all popular systems including Linux, macOS, Windows, Solaris, AIX and HP-UX.

With this automated solution, XeneX quickly and effectively addresses security configuration issues. This service eliminates the need for manual and time-consuming assessments that were historically performed by security staff. XeneX includes a set of policies based on the CIS benchmarks, a well-established standard for host hardening.

One of the most certain ways to secure hosts is by reducing their vulnerability surface. That process is commonly known as hardening, and configuration assessment is an effective way to determine opportunities where hosts could have their attack surface reduced, and here is where XeneX Security Configuration Assessment (SCA) comes into play.

XeneX SCA performs scans to discover exposures or misconfigurations in monitored hosts. Those scans assess the configuration of the hosts using policy files that contain rules to be tested against the actual configuration of the host.

The human readable format of this automated service allows users to quickly understand the vulnerabilities and write policies or extend the existing ones to fit the needs.

Highlights

Support for:

- Window
- Linux
- macOS
- Solaris
- AIX
- HP-UX

Automated Process

- Fast
- Cost-effective
- Comprehensive

Standards-based

- CIS benchmark

Our Vision

Continuously invest in technology, people and process improvements to deliver the most comprehensive cybersecurity technology platform and world-class white glove service for incident management. To be the leading SOCaaS, protecting our partners and customers, and helping them achieve their cybersecurity goals.
